Carbohydrate Binding Module 3E, Clostridium thermocellum

(CBM3)

Catalogue number Presentation

CZ02871 1 mg CZ02872 3 x 1 mg

Description

Carbohydrate Binding Module 3E (CBM3) is a Carbohydrate Binding Protein originating from *Clostridium thermocellum*. The recombinant CBM3, purified from *Escherichia coli*, is a single-domain protein belonging to the Carbohydrate Binding Module family 3 (CBM3, see more details at www.cazy.org). The protein is supplied in a solution containing 35 mM NaHepes buffer (pH 7.5), 750 mM NaCl, 200 mM Imidazole, 3.5 mM CaCl₂, and 25% (v/v) glycerol, at a concentration of 1 mg/mL. Bulk quantities of this product can be made available upon request. To place an order, simply visit our website. We offer fast and secure shipping worldwide.

Electrophoretic Purity

The molecular integrity and purity of CBM3 were evaluated using sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE), followed by BlueSafe staining (MB15201) (Figure 1).

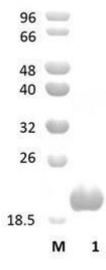

Figure 1. SDS-PAGE analysis of CBM3 was conducted in (Lane 1), employing a 14% polyacrylamide gel. The enzyme exhibits a band corresponding to a molecular weight of approximately 20,27 kDa. Lane M contains a Protein Marker for reference.

Storage temperature

The protein should be stored at -30°C to -15°C in a constant temperature freezer. The protein will remain stable till the expiry date if stored as specified.

Ligand specificity

CBM3 binds to crystalline forms of cellulose. The biochemical properties of CBM3 are detailed in the referenced publication(s) provided below.
