#### **Description**

Carbohydrate Binding Module 22A (CBM22) is a Carbohydrate Binding Protein originating from *Ruminococcus flavefaciens*. The recombinant CBM22, purified from *Escherichia coli*, is a single-domain protein belonging to the Carbohydrate Binding Module family 22 (CBM22, see more details at <a href="https://www.cazy.org">www.cazy.org</a>). The protein is supplied in a solution containing 35 mM NaHepes buffer (pH 7.5), 750 mM NaCl, 200 mM Imidazole, 3.5 mM CaCl<sub>2</sub>, and 25% (v/v) glycerol, at a concentration of 0.25 mg/mL. Bulk quantities of this product can be made available upon request. To place an order, simply visit our website. We offer fast and secure shipping worldwide.

#### **Electrophoretic Purity**

The molecular integrity and purity of CBM22 were evaluated using sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE), followed by BlueSafe staining (MB15201) (Figure 1).

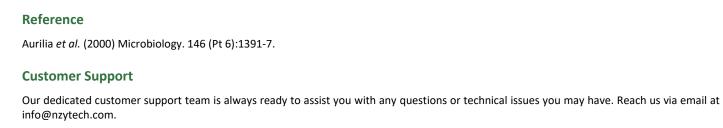

**Figure 1**. SDS-PAGE analysis of CBM22 was conducted in (Lane 1), employing a 14% polyacrylamide gel. The enzyme exhibits a band corresponding to a molecular weight of approximately 18,85 kDa. Lane M contains a Protein Marker for reference.

## Storage temperature

The protein should be stored at -30°C to -15°C in a constant temperature freezer. The protein will remain stable till the expiry date if stored as specified.

## **Ligand specificity**

CBM22 binds to decorated and undecorated 1,4- $\beta$ -xylans and arabinogalactans. The biochemical properties of CBM22 are detailed in the referenced publication(s) provided below.

Quality control assay

Protein purity is determined to be ≥90%, as assessed by SDS-PAGE and subsequent BlueSafe staining (MB15201).
