Carbohydrate Binding Module 22C, Ruminococcus flavefaciens

(CBM22)

Catalogue number Presentation

CZ03651 1 mg CZ03652 3 x 1 mg

Description

Carbohydrate Binding Module 22C (CBM22) is a Carbohydrate Binding Protein originating from *Ruminococcus flavefaciens*. The recombinant CBM22, purified from *Escherichia coli*, is a single-domain protein belonging to the Carbohydrate Binding Module family 22 (CBM22, see more details at www.cazy.org). The protein is supplied in a solution containing 35 mM NaHepes buffer (pH 7.5), 750 mM NaCl, 200 mM Imidazole, 3.5 mM CaCl₂, and 25% (v/v) glycerol, at a concentration of 1 mg/mL. Bulk quantities of this product can be made available upon request. To place an order, simply visit our website. We offer fast and secure shipping worldwide.

Electrophoretic Purity

The molecular integrity and purity of CBM22 were evaluated using sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE), followed by BlueSafe staining (MB15201) (Figure 1).

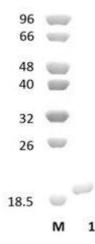

Figure 1. SDS-PAGE analysis of CBM22 was conducted in (Lane 1), employing a 14% polyacrylamide gel. The enzyme exhibits a band corresponding to a molecular weight of approximately 19,82 kDa. Lane M contains a Protein Marker for reference.

Storage temperature

The protein should be stored at -30°C to -15°C in a constant temperature freezer. The protein will remain stable till the expiry date if stored as specified.

Ligand specificity

CBM22 binds to decorated and undecorated 1,4-β-xylans and arabinogalactans.
