Chondroitin AC lyase 8A, Pseudopedobacter saltans

PsCac8A (PL8)

Catalogue numberPresentationCZ072210.5 mgCZ072223 x 0.5 mg

Description

Chondroitin AC lyase 8A (PSCac8A), assigned the E.C. number 4.2.2.5, is a derivative of PSEudopedobacter saltans. It is an enzyme that participates in the eliminative degradation of polysaccharides containing 1,4- β -D-hexosaminyl and 1,3- β -D-glucuronosyl linkages. The recombinant PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from $ESCherichia\ coli$, is a single-domain PSCac8A, purified from PSCac8A, purified from PSCac8A, purifi

Electrophoretic Purity

The molecular integrity and purity of *Ps*Cac8A (PL8) were evaluated using sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE), followed by BlueSafe staining (MB15201) (Figure 1).

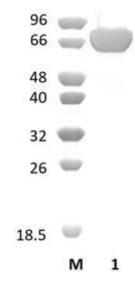

Figure 1. SDS-PAGE analysis of *Ps*Cac8A (PL8) was conducted in (Lane 1), employing a 14% polyacrylamide gel. The enzyme exhibits a band corresponding to a molecular weight of approximately 79,08 kDa. Lane M contains a Protein Marker for reference.

Storage temperature

The protein should be stored at -30°C to -15°C in a constant temperature freezer. The protein will remain stable till the expiry date if stored as specified.

Substrate specificity

PsCac8A (PL8) participates in the eliminative cleavage of chondroitin 4-sulphate and chondroitin 6-sulphate.

Temperature and pH optima

The pH optimum for enzymatic activity is 7.2 while temperature optimum is 39 °C.

Enzyme activity

The substrate specificity and kinetic properties of *Ps*Cac8A (PL8) are detailed in the referenced publication provided below. To perform enzyme assays and determine specific activity values, adhere to the methodology outlined in the cited paper(s).

Customer Support

Our dedicated customer support team is always ready to assist you with any questions or technical issues you may have. Reach us via email at info@nzytech.com.

Quality control assay

Protein purity is determined to be ≥90%, as assessed by SDS-PAGE and subsequent BlueSafe staining (MB15201).

For life science research only. Not for use in diagnostic procedures.
