

NZYDNA Ladder V

Catalogue numbers:

MB06101, 200 lanes

MB06102, 500 lanes

Description

NZYDNA Ladder V is a ready-to-use molecular weight marker, specially designed for easy size determination and DNA quantification. For best results using our ladder range we recommend using NZYTech agaroses.

Sizing

NZYDNA Ladder V produces a pattern of 10 regularly spaced bands, ranging from 100 to 1000 bp.

Quantification

When using the standard loading of 5 μ L per lane (600 ng of DNA) each band corresponds to a precise quantity of DNA (Figure 1).

Storage conditions

NZYDNA Ladder V should be stored at -20 °C until first use. Thereafter, the product can be stored at 4 °C for up to 6 months. Avoid multiple freeze thaw cycles, as these can damage the product.

Shipping conditions

The product can be shipped in a range of temperatures from dry ice to room-temperature.

Product life

The expiration date indicates the period of time over which NZYTech will guarantee 100 % effectiveness of this product if handled and stored under the recommended storage conditions.

Troubleshooting

Ladder is not sinking upon loading

Vortex briefly

To prevent degradation as a result of DNase contamination after opening

Make aliquots with a small quantity of the ladder

Quality control assay

Nuclease assay

To test for DNase activity, 20 μ L of NZYDNA Ladder V are incubated for 14-16 hours at 37°C and DNA integrity analysed through agarose gel electrophoresis.

Functional assay

5 μ L of NZYDNA Ladder V is loaded onto a 1.5% (w/v) agarose gel with TAE buffer and separated by electrophoresis to check the intensity and the pattern of bands. It is expected to observe 10 regularly spaced bands, as presented in Figure 1.

Figure 1. Precisely 5 μ L of NZYDNA Ladder V were electrophoresed in a 1.5% (w/v) electrophoresis grade agarose (MB027) gel. The gel was buffered with TAE (v/v) and stained with GreenSafe Premium (MB13201).
